

For tired eyes, discomfort when wearing contact lenses, etc.

Soft Santear Hitomi Stretch®

Features

Tired, dry eyes. Contact lenses feel uncomfortable. . . When wearing contact lenses, eyes are prone to eyestrain. Soft Santear Hitomi Stretch contains the maximum concentration*1 of two ingredients*2 to relax stiff eye muscles used for focus-adjustment (ciliary muscle), and the maximum concentration*1 of vitamin B₆ to promote tissue regeneration in tired eyes, thus improving eyestrain.

※This product can be used with all types of contact lenses (soft, O₂, hard, disposable). Not for use with color contact lenses.

*1: Maximum concentration according to approved standards for the manufacture and sale of non-prescription and ophthalmic medicine

*2: Neostigmine methyl sulfate, vitamin B₁₂

Eye drops can be used with some but not all soft contact lenses. Before using eye drops while wearing soft contact lenses, carefully read the instructions on the box and package insert, and confirm whether use of the eye drops is permitted.

Indications

Tired eyes, discomfort when wearing soft or hard contact lenses, prevention of eye problems (after swimming, when dust or sweat gets in one's eyes, etc.), blurred vision (excessive mucus, etc.)
